

Activities

Eni is a global energy company with a high technological content, engaged in the entire value chain: from the exploration, development and extraction of oil and natural gas, to the generation of electricity from cogeneration and renewable sources, traditional and bio refining and chemical, and the development of circular economy processes. Eni extends its reach to end markets, marketing gas, power and products to local markets and to retail and business customers also offering services of energy efficiency and sustainable mobility. Both CO₂ capture and storage and Natural Climate Solutions initiatives will be implemented to absorb residual emissions.

Consolidated expertise, technologies and geographical distribution of assets are Eni levers to strengthen its presence along the value chain.

Along this path, Eni is committed to become a leading company in the production and sale of decarbonized energy products, increasingly customer-oriented. Decarbonization will be achieved through the implementation and strengthening existing technologies and activities such as:

- ▶ **Efficiency and digitalization** in operations and customer services;
- ▶ **Renewables** through increased capacity and integration with the retail business;
- ▶ **Biorefineries** with an increasing input of raw material from **waste** and from an integrated agribio-feedstock production chain not in competition with food production;
- ▶ **Circular economy** with increased production of biomethane, use of waste products and recycling of end products;
- ▶ **Blue and green hydrogen** to power highly energy-intensive industrial activities and sustainable mobility;
- ▶ Natural or artificial **carbon capture** to absorb residual emissions through Natural Climate Solutions, including **REDD+** forest conservation **initiatives** and **CCS** projects.

Gas will be an important support to intermittent sources in the energy transition.
